SUMMARY

Full-stack developer with 2 years of experience in building and shipping production-ready web applications with the PERN stack (PostgreSQL, Express.js, React, Node.js) in both JavaScript and TypeScript. Recent work includes designing a multi-tenant SaaS backend with local embedding generation, vector search, and LLM-based data extraction, as well as building a NestJS/Prisma API from scratch to complete a backend technical challenge. Comfortable integrating third-party APIs, designing relational database schemas, and implementing secure authentication. Currently deepening expertise in TypeScript, containerized deployments, and applied AI/LLM tooling.

Education

Addis Ababa University — Addis Ababa, Ethiopia

Bachelor of Science in Computer Science, Expected Graduation: 2027

HACKATHONS & LEADERSHIP

1st Place, SIS (IS Hub) Hackathon — AI-Powered Agricultural Advisory System

- Collaborated on a team project building an automated messaging system that delivers seasonal farming advice to farmers using AI to organize and structure raw information from regional agricultural offices
- Contributed to the pipeline design, converting unstructured input from agricultural offices into clear, targeted seasonal guidance for farmers
- Won 1st place among competing teams for real-world applicability and technical execution

Website Design Contributor, Interact Ethiopia

- Contributed to the design of Interact Ethiopia's official website

- Collaborated with the organization to translate its mission and content into a functional, public-facing site

NOTABLE PROJECTS

Internship Applicant Management API — NestJS, TypeScript, Prisma ORM, PostgreSQL (Neon), JWT/Passport, Swagger, Jest, Groq LLM

- Built a full backend technical assessment from scratch in under a week, learning NestJS, Prisma, and Swagger during the process
- Designed a modular NestJS architecture (Auth, Applicants, Dashboard, Prisma modules) with JWT bearer authentication, argon2 password hashing, and route guards protecting all administrative operations
- Implemented paginated, searchable, filterable, and sortable applicant listing, along with a status state-machine guard enforcing valid application-status transitions
- Added an AI-powered resume-parsing feature: PDF text extraction combined with Groq LLM structured-output extraction, validated end-to-end with Zod schemas before use
- Wrote targeted Jest unit tests covering uniqueness constraints, soft-delete exclusion, status-transition rules, and AI-output validation
- Documented the system with full Swagger/OpenAPI docs and a setup-to-deployment README

B2B Resume Screening Platform — TypeScript, Node.js, Hono, PostgreSQL (Neon), Redis, Docker, Vector Embeddings, LLM Integration

- Designed and built a SaaS system that lets companies collect and automatically rank job applicants by fit
- Built a resume ingestion pipeline: PDF parsing, text chunking, and local embedding generation using Hugging Face Transformers
- Implemented semantic search and candidate ranking with a vector index, combining vector similarity, extracted-skills matching, and experience scoring into a weighted relevance score
- Integrated an LLM (Groq) to extract structured candidate skill profiles from resumes, with Zod schema validation to guarantee safe, typed output
- Designed a relational schema (companies, jobs, resumes, applications) supporting multiple companies and job postings without reprocessing shared data
- Added Redis caching (cache-aside pattern) to eliminate redundant embedding and LLM calls, and containerized the full stack with Docker

CineRate — PERN Stack, Google Authentication, Tailwind CSS, JWT

- Built a full-stack social platform for film discovery and user-generated reviews
- Integrated the TMDB API to display trending, top-rated, and detailed film information
- Implemented user ratings, reviews, watchlists, and activity tracking
- Developed RESTful APIs for handling user data and interactions
- Designed a responsive UI with Tailwind CSS for improved user experience

BOOKish — Node.js, Express, PostgreSQL, Google Authentication, EJS, CSS

- Developed a full-stack web application for searching and organizing books
- Integrated the Google Books API to fetch and display structured book data dynamically
- Implemented secure authentication using Google OAuth 2.0
- Designed a relational database schema in PostgreSQL to manage user-specific reading lists
- Built RESTful routes and server-rendered views using Express.js and EJS

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Java, C++, SQL
- **Backend:** Node.js, Express, NestJS, Hono, RESTful API design
- **Frontend:** React, Next.js, Tailwind CSS, HTML/CSS, Bootstrap, EJS
- **Databases & Storage:** PostgreSQL, Prisma ORM, Redis, Vector databases/embeddings
- **AI/LLM Tooling:** Hugging Face Transformers, LLM API integration (Groq), prompt-based structured extraction
- **DevOps/Tools:** Docker, Git, GitHub, GitHub Actions, Postman, VS Code, Swagger/OpenAPI
- **Validation & Type Safety:** Zod, class-validator, TypeScript strict mode
- **Core Concepts:** Data Structures & Algorithms, Relational Database Design
